

SCHEDULE "GS"
GENERAL SERVICE RATE FOR NON-RESIDENTIAL SERVICE

AVAILABILITY: This schedule is available and applicable throughout the City's entire Service area for all Single and/or 3-phase Non-residential Service not specified or for which the City's Residential Schedule "R" is not applicable.

Schedule "GS" is applicable to all service furnished to retail or wholesale businesses, manufacturing or processing establishments, hotels, motels, stores, restaurants, service stations, professional offices, theaters, amusements, offices, schools, churches, clubs, lodges, public buildings, etc. and all other service that is not strictly Residential in character.

This Schedule applies to all 3-phase service, whether Residential or Non-Residential. All service under Schedule "GS" is subject to the provisions of this Schedule and the City's General Rules and Regulations or subsequent revision thereof, as if fully written herein. For new loads establishing service on or after the effective date of this ordinance, Utility reserves the right to limit the availability of this schedule to a maximum load of 150 kVa (See Section 14 of Other Terms & Conditions that follows).

**NET RATE PER MONTH OR PART THEREOF PER
SERVICE DROP LOCATION OR ESTABLISHMENT:**

The Monthly Billing shall be the sum of the charges under the applicable rate set forth below:

NON-DEMAND SERVICE: *

Service Charge: (per Month)	Single-Phase:	\$15.00
	Three-Phase:	25.00

Energy Charge: (per kWh)	All kWh @ \$0.100 per kWh
--------------------------	---------------------------

DEMAND SERVICE:

Service Charge: (per Month)	Single-Phase:	\$15.00
	Three-Phase:	25.00

Energy Charge: (per kWh)	All kWh @ \$0.080 per kWh
--------------------------	---------------------------

Demand Charge: (per kW of Billing Demand)	All kW @ \$6.00 per kW
---	------------------------

* Only available to customers taking service prior to July 1, 2014 under Utility's Class B Commercial Rate.

POWER SUPPLY COST ADJUSTMENT: The Rates and Charges set forth above are subject to the adjustment specified in the City's Rider "A" Power Supply Cost Adjustment.

EXCISE (KILOWATT-HOUR) TAX ADJUSTMENT: The rates and charges set forth in this schedule shall be increased by an amount equal to the excise (kilowatt-hour) tax imposed on the City's electric distribution system under Ohio Revised Code 5727.81. Said increase shall be automatically adjusted to reflect any change in the kilowatt-hour tax imposed by Ohio Revised Code 5727.81.

MONTHLY MINIMUM CHARGE: The Monthly Minimum Charge per Consumer shall be the sum of the charges set forth above, but not less than the applicable Service Charge. Said Minimum Charge shall not be reduced by application of a negative Power Supply Cost Adjustment.

All billings are subject to the provisions relating to determination of kW Billing Demand, Terms of Payment and the other Terms and Conditions hereinafter set forth.

DETERMINATION OF KW BILLING DEMAND: The kW Billing Demand shall be the highest measured 30 minute integrated or equivalent thermal kW Demand determined to the nearest kW by means of suitable metering equipment specified by the City.

The City reserves the right at any time to install Demand Metering Equipment. Where Demand metering equipment is not installed or inoperable, the kW Billing Demand may be estimated by the City, based on tests or other reasonable basis as determined by the City.

For high fluctuation loads, such as welders, hoists and the like, the measured Demand in kW shall be increased by an amount that is equal to 80% of any separately installed or allocated kVa of transformer capacity required to supply fluctuating loads.

OTHER TERMS AND CONDITIONS:

1. Character of Service: For new installations, service will normally be supplied through a single set of service wires with all service delivered to a single meter location. Under such conditions, a single bill will be rendered for service.
2. Multiple Bill for Service Supplied through Multiple Service Drop: Where service is delivered through individual and separately metered single and 3-phase service drops at different meter locations, a separate bill will be rendered for each service drop.

3. Metering Voltage: Under Schedule "GS", the City reserves the right to meter Consumer's requirements in the most practical manner either at the City's secondary or primary distribution voltage and in either case the billing kWh shall be the metered kWh.
4. Service Classification for Billing Purposes: In determining Consumer's classification for billing purposes, any establishment carrying a business, professional, commercial or non-residential advertisement and/or title such as but not limited to: telephone directory listing, outdoor signage or Internet advertisement shall automatically be classified as being Non-Residential in character and Schedule "GS" shall apply. However, the absence of such listing shall not be the determining factor in establishing whether or not the service utilization is Non-Residential in character. See Section 5 as to Consumer's option where combined service is involved.
5. Combined Residential & Non-Residential Service: Where the premises are used and occupied by a consumer for both Residential and Non-Residential use as defined herein, all service shall be billed under Schedule "GS" or at consumer's option, the wiring may be separated (subject to the City's inspection & approval). In such an event each class of service will be separately metered and billed under each applicable schedule.
6. Definition of Rural General Service: Service furnished outside of the City's corporate limits shall be considered General Service in character where such service is not incidental to residential use and/or where such service is used for the preparation or processing of food or other products to the extent that same are substantially in a form that they can use or can be readily adopted for use by, or for sale to the ultimate consumer.

In addition, all electric service supplied outside the City's corporate limits for activities, purposes, or uses, that when carried on within corporate limits would be classified as being non-residential in character and so billed, shall likewise be considered and defined as non-residential in character and Schedule "GS" shall apply.

7. Availability of 3-Phase Service: Normally only single phase service is available. The City may, at its option, furnish 3-phase service, if such is already available immediately adjacent to consumer's premises and if it is practical and economical for the City to furnish 3-phase service, after giving consideration to the investment required and probable use of 3-phase service by consumer, also providing Consumer enters into an appropriate Contract covering the investment involved. The minimum charge and financing of any 3-phase line extension shall conform to the City's General Rules and Regulations.
8. 3-Phase Service Required for Unbalanced or Fluctuating Loads: For high fluctuation loads such as welders and electric melting furnaces, and/or unbalanced single phase loads, the

ELECTRIC UTILITY DEPARTMENT
City of Columbiana, Ohio

City reserves the right to require that such loads be operated at 3-phase, with the load balanced as far as practical on each phase.

9. Motor Specification: Single phase service will not be furnished to separate individual motors in excess of 15 HP rating, except where written permission is granted by the City.

All motors 10 HP and larger may, at the City's option be required to be equipped with reduced voltage starting equipment or other devices, to avoid unnecessary voltage surges and fluctuation on the City's system. Motors designed for full voltage "across the line" starting may, at the City's option, be permitted to operate on the City's system, provided, however, that the City has determined that such operation will not be detrimental to service furnished others.

10. New Line Extension: All new line extension or the furnishing of additional demand shall be subject to the City's General Rules and Regulations covering the same.

11. Temporary Service: For temporary service, the consumer shall pay all charges specified in the City's other charges for special services.

12. Other Charges for Special Services: See the City's Rules and Regulations as to charges not set forth herein, applicable for the Disconnection and Reconnection of Service and the Charges to be made for other Special Services furnished Consumers.

13. Use of Service: Service under this Schedule shall not be resold or shared with others. This includes the sale of service by property owners for billing purposes to tenant's use of sub meters.

14. Limitation of Schedule "GS": When, in opinion of the City, the system capacity required to adequately supply Consumer's existing and probable future requirements exceeds 150 kVa, Utility reserves the right to require Consumer to make the necessary complete substation installation. In such an event all service will be billed under Utility's Schedule "LP" and Consumer shall receive the specified Substation Discount.
